Corporate Property and Casualty Underwriting

CPCU-1 - AUTOMATED GEOCODING & GIS INTEGRATION

CPCU-2 – INTELLIGENT MAILROOM AUTOMATION

CPCU-3 – INFORMATION AGGREGATION AND PRICING AUTOMATION

CPCU-4 - PUBLIC TENDER INTELLIGENCE & PROCESSING

CPCU-5 - CONTRACT GENERATION & DOCUMENT AUTOMATION

CPCU-1 AUTOMATED GEOCODING & GIS INTEGRATION

Quick Win

Initiative Scope / Main Activities

Phase 1: Historical Backlog Processing
Scan existing 3,000 contracts (Word / Excel attachments)
Extract all risk addresses from complex multi-location policies
Convert addresses to XY coordinates via geocoding API
Phase 2: Ongoing Automation
Real-time processing for new contracts
Direct integration with GEOL GIS platform
Automated CSV/Excel export for bulk uploads

Current Situation

Manual line-by-line extraction of addresses from Word / Excel contract attachments. Staff manually converts addresses to XY coordinates for GIS platform import. Process is time-consuming with ~3,000 contracts pending geocoding. No integration between contract systems and GEOL platform.

Documents Involved

- Multi-location policy contracts (Word)
- Risk address attachments (Excel)
- GIS import templates

Benefits

- **Immediate Productivity:** Eliminates hours of manual extraction work
- **100% Coverage:** All properties geocoded for catastrophe modelling
- **Scalability:** Handles both backlog & new contracts automatically

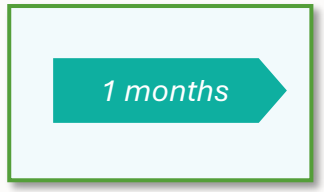
Business outcome

Phase 1: Clear 3,000-contract backlog within 10 days

Phase 2: Real-time geocoding for all new contracts

Indicators

Timeline



Quick Win Tactical Transformational

CPCU-2 INTELLIGENT MAILROOM AUTOMATION

Quick Win

Initiative Scope / Main Activities

- Implement NLP for email body and attachment classification
- Categorize into: Offer / Contract / Addendum / Question (tbc)
- Smart routing to correct workflow / underwriter
- Priority scoring and duplicate detection
- Extract summaries and action items

Benefits

- Triage Efficiency: Reduction in email sorting time
- Routing Accuracy: 90%+ correct assignment
- Workload Balance: Even distribution across team members

Current Situation

5,000 daily emails arrive in shared mailboxes without organization. Manual sorting and routing causes delays and misrouted emails.

Business outcome

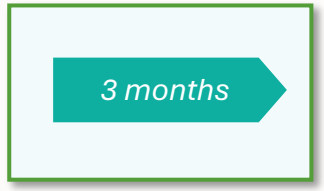
Transform email chaos into organized workflow with automated classification, routing, and prioritization. Enable quicker response for all/urgent requests.

Documents Involved

- Incoming emails (5,000 per day)
- PDF attachments

Indicators

Timeline



Quick Win Tactical Transformational

CPCU-3 INFORMATION AGGREGATION AND PRICING AUTOMATION

Tactical

Initiative Scope / Main Activities

- Ingest partner request documents (email, PDFs, attachments)
- Extract relevant data
- Auto-populate Excel underwriting proposal templates
- Preserve underwriter control over critical decisions (exposure, reinsurance, pricing)
- (Opt) Integrate with existing systems (Aviva, MOS) for historical data

Current Situation

Underwriters manually copy-paste data from partner emails and documents into Excel proposal templates. Each proposal requires searching across 9+ systems for client history and risk information. Process is error-prone and time-consuming, limiting quote capacity.

Documents Involved

- Partner request emails
- Risk information documents (PDFs)
- Excel underwriting templates / Rating Tools

Benefits

- **Efficiency Gain:** Reduction in proposal preparation time
- **Focus on Value:** Underwriters focus on decisions, not data entry
- **Error Reduction**
- **Capacity Increase**

Business outcome

- Transform quote preparation from hours to minutes while maintaining underwriter control over critical risk decisions.
- Enable same-day response for standard proposals.

Indicators

Complexity

Benefit

Timeline

3 months

Quick Win Tactical Transformational

CPCU-4 PUBLIC TENDER INTELLIGENCE & PROCESSING

Tactical

Initiative Scope / Main Activities

Phase 1: Automated Tender Discovery
- Scan multiple tender platforms for new opportunities
- Filter relevant insurance tenders (~750 per year)

Phase 2: Technical Requirements Extraction
- AI extraction of "Technical Requirements“
- Route to appropriate department

Benefits

- Speed
- Coverage
- Efficiency
- Win Rate

Current Situation

Manual monitoring of tender platforms and review of lengthy tender documents. Staff manually extract technical requirements from 60-70 page Greek documents. Coordination across departments is manual and time-consuming. Missing opportunities due to discovery delays.

Business outcome

- Increased tender opportunity capture
- Automated requirements extraction and summary

Documents Involved

- Public tender documents
- Technical specifications
- Relevancy Rules

Indicators

Complexity

Benefit

Timeline

3 months

Quick Win Tactical Transformational

CPCU-5 CONTRACT GENERATION & DOCUMENT AUTOMATION

Tactical

Initiative Scope / Main Activities

- Template-based generation for approved proposals
- Dynamic population from underwriting decisions
- Clause library management for standard vs. custom
- Compliance validation and agent reviewing

Benefits

- Speed: Faster document creation
- Accuracy: Reduction in documentation errors
- Consistency: Template compliance
- Time to Market: Improvement in policy issuance

Current Situation

Manual contract creation from approved proposals with extensive copy-paste operations. Multiple review cycles needed. Separate processes for standard packages vs. customized contracts.

Business outcome

Automate contract generation while maintaining compliance and customization flexibility. Enable same-day policy issuance for standard products.

Documents Involved

- Contract templates
- Approved proposals
- Reinsurance documentation
- Compliance checklists

Indicators

Complexity

Benefit

Timeline

4 months

Quick Win Tactical Transformational

Customer Experience - Call Center

CX-1 - CALL TRANSCRIPTION & SUMMARISATION

CX-2 – AI ASSISTANT – INTELLIGENT AGENT ASSISTANT (REAL-TIME)

CX-3 – AI ASSISTANT – TRANSACTION QUERIES

CX-4 – AI ASSISTANT – ASESSORS APPOINTMENTS

CX-5 – EMAIL/FORM CATEGORISATION & ROUTING

CX-1 CALL TRANSCRIPTION, SUMMARIZATION & CRM AUTO-POPULATION

Tactical

Initiative Scope / Main Activities

Real-time speech-to-text transcription during customer calls
Automatic generation of structured call summaries
Intelligent extraction of key data points (customer info, issue type, resolution, next steps)
Automated population of Salesforce fields with extracted information

Current Situation

Agents manually take notes during calls and spend significant time post-call entering summaries and relevant data into Salesforce. This manual process is time-consuming, subject to human error and inconsistency, and reduces agent capacity for handling additional calls.

Systems Involved

Genesis (Call Center Platform), Salesforce, CRM, Quality Assurance Systems

Benefits

- Increased Efficiency
- Data Quality: Improves CRM completeness and consistency
- Agent Capacity: Frees agents to handle more calls

Business outcome

Significant reduction in average handle time (after-call work component), improved CRM data quality for downstream analytics and customer service, and increase in effective agent capacity.

Indicators

Complexity

Benefit

Timeline

4 months

Quick Win Tactical Transformational

CX-2 INTELLIGENT AGENT ASSISTANT (REAL-TIME SUPPORT)

Transformational

Initiative Scope / Main Activities

Consolidate customer information from Salesforce and critical legacy systems
Real-time(?) call monitoring with intent detection
Proactive information surfacing based on conversation context
Integration with existing knowledge base and FAQ systems

Current Situation

Only ~40% of required customer information resides in Salesforce. Agents must manually search across 9+ core systems (Aviva, Saperion, etc.) during active calls, requiring system switching that increases hold time and handle time. This significantly impacts efficiency and customer experience. Salesforce consolidation is underway but will take 6-18 months.

Systems Involved

Salesforce, CRM (Priority), Aviva (Legacy System), Saperion (Claims / Damage Data), 6+ Additional Core Systems, Genesis (Call Center Platform), Knowledge Base Systems

Benefits

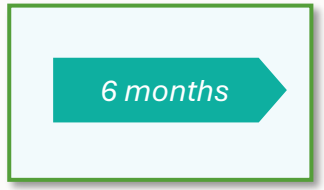
- Reduces Hold Time: Faster information retrieval
- Improves Accuracy: Consistent, complete information access
- Reduces Training Time: Simplified workflows for new agents
- Scalability: Handles external collaborator inquiries efficiently

Business outcome

Target reduction in average handle time from 4 minutes to 3 minutes (25% improvement). First call resolution rate increase from 85% to 88-90%. Improved customer satisfaction through faster, more accurate service delivery.

Indicators

Timeline



Quick Win Tactical Transformational

CX-3 TRANSACTION AUTOMATION - PAYMENT INQUIRIES

Tactical

Initiative Scope / Main Activities

Identify common payment inquiry patterns
Develop AI-powered information retrieval from payment systems
Automate response generation for standard payment queries
Create exception handling workflow for complex cases
Enable quick access to payment history and upcoming obligations

Current Situation

Large volume of repetitive payment-related calls (~150-180/day) that follow predictable patterns. Agents manually look up payment information across systems, consuming significant handle time for routine transactional inquiries that could be automated.

Systems Involved

Payment Processing Systems, Salesforce CRM, Policy Management Systems, Genesis (Call Center Platform)

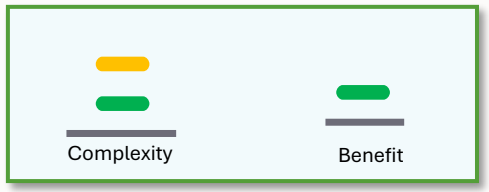
Benefits

- Reduces Processing Time: Automates high-volume repetitive inquiries
- Faster Response: Instant access to payment information
- Agent Capacity: Frees agents for complex problem-solving
- Consistency: Standardized responses to payment questions

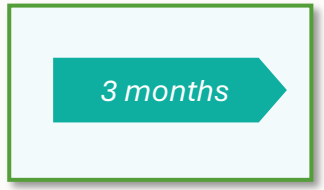
Business outcome

Reduced handle time for payment-related calls (significant portion of daily volume). Improved agent efficiency allowing focus on complex customer needs. Potential foundation for future self-service expansion.

Indicators



Timeline



Quick Win Tactical Transformational

CX-4 ASSESSOR APPOINTMENT SCHEDULING

Tactical

Initiative Scope / Main Activities

- Deploy AI voice agent for inbound scheduling calls
- Real-time availability checking and optimization
- Automated SMS/email confirmations
- Rescheduling capabilities with conflict management

Benefits

- Speed: Reduction in assessment time
- Accuracy: Improvement in risk detection
- Standardization: Consistent evaluation criteria

Current Situation

- Manual scheduling of 30,000 annual assessor appointments via phone
- Agents spend significant time coordinating between customers and assessors
- No 24/7 scheduling availability leading to customer inconvenience

Business outcome

Structured assessment with AI recommendations while preserving human oversight, expanding capacity for commercial portfolio

Systems Involved

Calendar management system, Aviva (claim records)

Indicators

Complexity

Benefit

Timeline

4 months

Quick Win Tactical Transformational

CX-5 ADVANCED EMAIL/FORM CATEGORIZATION & INTELLIGENT ROUTING

Quick Win

Initiative Scope / Main Activities

Analyze form submissions and remaining emails (~1,000/day) for granular routing
Intelligent assignment to appropriate specialists based on content analysis
Priority flagging based on urgency, complexity, and SLA requirements
Action type identification (information request, complaint, transaction, etc.)
Automated data extraction to Salesforce

Current Situation

Level 2 team handles ~1,000 emails/day. New form-based submission system (launching Phase 2, ~1 month) provides basic categorization but cannot include 100+ detailed fields. Manual triage still required for detailed routing and specialist assignment. Time-consuming for Level 2 agents to review and route appropriately.

Systems Involved

Email System Form Submission Platform (New), Salesforce CRM, Workflow Management System Level 2 Queue Management

Benefits

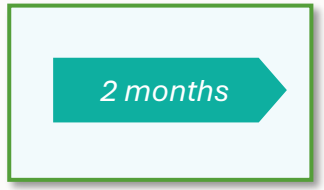
- Reduces Triage Time
- Faster Response: Reduced time from submission to appropriate handler
- Better SLA Management: Priority-based intelligent routing
- Workload Distribution: Balanced assignment across Level 2 team

Business outcome

Level 2 capacity freed by 30-50% for complex work. Email response time reduction of 40%. Improved SLA compliance. Consistent and accurate routing that forms alone cannot achieve.

Indicators

Timeline



Quick Win Tactical Transformational

Retail Property and Casualty Claims - Motor

PCM-1 - AUTOMATED INTAKE

PCM-1 AUTOMATED CLAIM INTAKE (FNOL)

Tactical

Initiative Scope / Main Activities

- Web portal implementation with photo/video upload capability
- Document OCR for automatic data extraction
- Geolocation capture for accident verification
- Completeness validation and duplicate screening
- Potential system integration with auto claim file creation
- Fleet client training for self-service portal usage

Current Situation

- 40% of claims require manual intervention despite Mondial outsourcing
- High dependency on Mondial creates significant costs and quality issues with 25% error rate
- No direct integration for large fleet clients who prefer direct communication
- Manual processes lead to delays and data quality issues

Systems Involved

Aviva, Saperion (document storage)

Benefits

- Availability: 24/7 claim reporting capability
- Data Quality: Consistent and complete at intake
- Fleet Integration: Direct corporate client access

Business outcome

Reduce Mondial dependency / gaps while establishing intake system with improved data quality and customer experience through portal and potentially voice channels

Life & Health Claims

LHC-1 - HEALTH CLAIMS EMAIL PROCESSING & AUTO-POPULATION (ANNOUNCEMETS)

LHC-2 – HOSPITALISATION CLAIMS ROUTING

LHC-3 – INVOICE DATA EXTRACTION & VALIDATION

LHC-4 – FRAUD DETECTION & RISK ASSESSMENT

LHC-5 – LVL3 SUPPORT QUERY AUTOMATION

LHC-1 HEALTH CLAIMS EMAIL PROCESSING & AUTO-POPULATION (ANNOUNCEMETS)

Tactical

Initiative Scope / Main Activities

Implement AI-powered email monitoring and processing system
Automate data extraction from 150 daily health claim emails
Create automated dual-system population (C-MOD and Aviva)
Establish missing-document detection with automatic notification

Current Situation

Multiple staff members manually open and process 150 emails daily for health damage claims. Each email requires manual data extraction from various attachment formats, followed by duplicate data entry into both C-MOD and Aviva systems. No automated validation or missing document detection exists, leading to delays and rework.

Systems Involved

Aviva (Core insurance system)C-MOD (Document archiving)Email platform

Benefits

- Eliminates manual email triage and dual data entry
- Ensures data consistency across systems
- Complete audit trail and compliance

Business outcome

Same-day processing capability with <5% error rate. Real-time automated processing of all 150 daily emails, enabling staff reallocation to higher-value tasks and improved customer response times.

Indicators

Complexity

Benefit

Timeline

3 months

Quick Win Tactical Transformational

LHC-2 INTELLIGENT HOSPITALIZATION CLAIMS ROUTING

Transformational

Initiative Scope / Main Activities

Integrate Triple (Accurate) nightly feed with Aviva data

Deploy AI decision support with confidence scoring

Build business rules engine for repetitive cases

Benefits

- Reduction in external resources
- Faster claim decisions
- Consistent rule application

Current Situation

Hospitalization claims require manual pattern recognition and routing decisions, heavily relying on external resources. Despite existing RPA for submission to Aviva, staff must manually decide if claims should enter the system, causing delays and inconsistent decisions.

Business outcome

Automated pre-approval for standardized hospitalizations. Human adjusters focus only on complex cases while routine admissions process automatically.

Systems Involved

Triple (Accurate's system)Aviva (Core system)Existing RPA

Quick Win Tactical Transformational

LHC-3 INVOICE DATA EXTRACTION & VALIDATION

Quick Win

Initiative Scope / Main Activities

Data extraction for Invoices

Prepare for / Integrate with Coassess (Covariance) for fraud/quality checks

Build proforma-to-invoice matching engine

Benefits

- Payment cycle reduced
- Increase throughput capacity
- Eliminates manual payment authorization

Current Situation

Hospital invoices arrive in various formats requiring manual data entry into multiple systems. Staff manually validate invoices, update Coassess, populate Aviva, and route for payment approval

Business outcome

Fully automated invoice processing with <15% manual intervention. Comprehensive quality checks, faster vendor payments, and complete audit trail for regulatory compliance.

Systems Involved

Coassess (Covariance) , Aviva(Core system)

Indicators

Complexity

Benefit

Timeline

Quick Win Tactical Transformational

LHC-4 AI-POWERED FRAUD DETECTION & RISK ASSESSMENT

Transformational

Initiative Scope / Main Activities

- Extract signals from medical notes, diagnostics, receipts
- Implement multi-factor risk scoring (high/med/low)
- Build pattern analysis and anomaly detection
- Create explainable AI decision framework
- Automate missing information requests

Current Situation

Fraud detection relies on manual review with inconsistent application of risk factors. Two problematic compensation lines require extensive manual investigation. High false positive rates waste adjuster time while actual fraud cases may be missed.

Systems Involved

Aviva (Claims history) C-MOD (Medical documents) Triple (Policy data)

Benefits

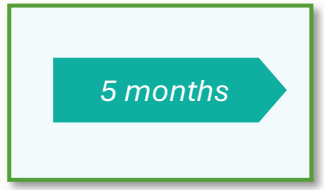
- Improvement in fraud detection
- Reduction in false positives
- Faster investigations
- Focus on genuinely high-risk cases

Business outcome

AI-powered risk dashboard providing automated fraud scores with explanations. 60% faster processing for low-risk claims, allowing adjusters to focus on high-risk cases with better detection rates.

Indicators

Timeline



Quick Win Tactical Transformational

LHC-5 LEVEL 3 SUPPORT QUERY AUTOMATION

Tactical

Initiative Scope / Main Activities

- Categorize and analyze Level-3 query patterns
- Deploy NLP for intent detection and routing
- Implement AI-assisted response generation
- Maintain human-in-the-loop for complex cases

Benefits

- Faster query resolution
- Standardized communication

Current Situation

Complex queries escalated to Level-3 require adjusters to manually research across multiple sources and compose responses. No standardization exists.

Business outcome

AI-generated draft responses for common Level-3 queries with consistent corporate language. Adjusters review and approve, focusing effort on truly complex cases.

Life & Health Underwriting

LHU-1 - CLIENT ENTITY MATCHING & HISTORY

LHU-2 - MEDICAL DOCUMENTS IDP & ADVISORY

LHU-3 - ADDITIONAL CLAUSES AUTOMATION

LHU-1 CLIENT ENTITY MATCHING & HISTORY AGGREGATION

Transformational

Initiative Scope / Main Activities

Automated client recognition using AI/ML matching algorithms
Cross-department data consolidation for unified client view
Real-time agent assistance with auto-population and suggestions
Business rules validation engine implementation

Current Situation

Many contracts from existing clients are treated as new customers. Underwriters manually check across departments for existing relationships, spending 10-15% of processing time on client research. No unified view of client history across products/departments exists, leading to duplicate entries and missed information.

Systems Involved

AVIVA (core system)Portal UI (agent interface)Saperion (document management)

Benefits

- Time Savings: Reduction in underwriting time
- Data Quality: Reduction in duplicate entries

Business outcome

Unified client intelligence platform providing instant access to complete customer history, enabling faster and more accurate underwriting decisions while improving customer satisfaction through recognition.

Indicators

LHU-2 MEDICAL DOCUMENTS IDP & ADVISORY SUMMARIES

Tactical

Initiative Scope / Main Activities

OCR/NLP extraction from medical documents (labs, reports)
Pattern recognition for medical conditions and risk indicators
Automated flagging of high-risk factors
Potential recommendation engine for terms/premiums
Phased implementation starting with advisory mode

Current Situation

Manual review of all medical documents by underwriters requires significant time and expertise. Risk of missing critical medical information. Assessment criteria varies by individual underwriter experience. No standardized evaluation framework exists.

Systems Involved

AVIVA (policy management)Portal (underwriting interface)Document processing pipeline

Benefits

- Efficiency: Reduction in medical review time
- Standardization: Consistent risk evaluation across team
- Quality: Reduced missed findings and better risk identification
- Enablement

Business outcome

Intelligent medical underwriting assistant providing standardized risk assessment while preserving human expertise for final decisions, significantly improving processing speed and decision quality.

Quick Win Tactical Transformational

LHU-3 ADDITIONAL CLAUSES AUTOMATION

Transformational

Initiative Scope / Main Activities

Email/document parser for ~120K annual requests
Auto-classification by request type (beneficiary, payment, address)
RPA integration for AVIVA system updates
Exception handling workflow for complex cases

Current Situation

Manual process handling ~120K addendum requests annually via email and physical mail. Each request requires 5-6 manual steps in AVIVA. No batch processing exists. High-volume types: payment changes (7,000), address changes (6,500), beneficiary changes (800).

Systems Involved

AVIVA (core updates) Email systems Saperion (document storage)

Benefits

- Automation: From 0% to 80%+ automated processing
- Speed: Processing time from days to hours
- Capacity: 3x volume handling capability

Business outcome

Fully automated addendum processing pipeline eliminating manual data entry, enabling same-day processing for standard requests while freeing 70% of staff capacity for complex cases.

GLH-1 - AUTOMATED OFFER GENERATION & PRICING

GLH-2 - CONTRACT GENERATION AUTOMATION

GLH-3 - INTEGRATION & MEMBER ONBOARDING

GLH-1 AUTOMATED OFFER GENERATION & PRICING

Quick Win

Initiative Scope / Main Activities

Phase 1: Deploy flexible solution
Configure pricing model and rate tables
Phase 2: Agent uploads census file → AI calculates pricing → System generates PDF proposal with dynamic content

Benefits

- **Increased Efficiency:** Reduction in processing time per proposal
- **Higher Accuracy:** Minimizes human error in data validation.
- **Consistency:** Standardized formatting and quality across all proposals
- **Agent Experience:** Instant proposal generation capability

Current Situation

- Underwriters manually calculate premiums
- Manual proposal document creation with high customization Supervisor review required to catch typos and errors
- Time-consuming process represents "significant portion of team time"

Business outcome

Phase 1: Automated pricing and template system operational.

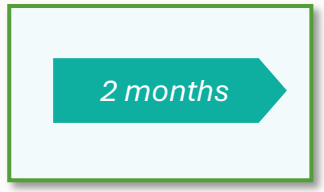
Phase 2: Complete end-to-end proposal automation with freed underwriter capacity for complex cases.

Documents Involved

- Census files (Excel)
- Proposal templates
- Coverage descriptions
- Rate tables

Indicators

Timeline



Quick Win Tactical Transformational

GLH-2 CONTRACT GENERATION AUTOMATION

Tactical

Initiative Scope / Main Activities

Phase 1: Automated Data Extraction
- AI extracts data from signed client forms (start date, payment terms) signature detection and validation

Phase 2: Contract Auto-generation
- System generates contracts matching accepted proposals

Benefits

- **Elimination of Duplicate Work:** Reduction in contract creation time
- **Risk Reduction:** Minimized legal / compliance variations
- **Automated Validation:** AI-powered signature verification with custom business rules

Current Situation

- Manual contract creation duplicating proposal information
- Risk of discrepancies between proposal and contract
- Manual signature verification and tracking
- Time-consuming document management

Business Outcome

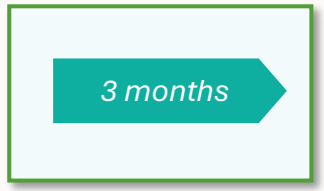
Automated data extraction and signature validation and complete contract automation.

Documents Involved

- Signed client acceptance forms
- Contract templates
- Proposal data
- Signature documents

Indicators

Timeline



Quick Win Tactical Transformational

GLH-3 AVIVA SYSTEM INTEGRATION & MEMBER ONBOARDING

Tactical

Initiative Scope / Main Activities

Load File Automation
Automated member census upload
Automated member invitation emails

Benefits

Operational Efficiency: Eliminate 2-4 hours manual entry per policy
Data Quality: Consistent, complete, error-free data entry
Claims Processing: Proper coverage sync enables automated claims
Same-day Activation: Immediate policy operationalization

Current Situation

- Manual data entry into Aviva system (2-4 hours per policy)
- Legacy system cannot store granular coverage details
- Manual member onboarding and invitation process
- No automated payment verification workflow

Business Outcome

- Phase 1: Automated member loading with payment control
- Phase 2: Full system integration enabling automated claims processing
- Phase 3: Complete policy data management and analytics capability

Technology

TECH-1 - IT / Service Desk Front-line and operations

TECH-2 - IT / DevOps

TECHNOLOGY

TECH-1 IT / Service Desk Front-line and Back-office fulfilment operations

Transformation

Initiative brief

Front-Line Capabilities
Virtual agent to handle common requests, provide guided troubleshooting, and deflect tickets.
Automatic classification, prioritization, and routing of incidents and requests.
AI-generated solution suggestions and improved knowledge search for users and agents.

Back-End Capabilities
AI-assisted diagnostics using historical incidents, logs, and monitoring data.
Recommendations for resolution steps and proactive identification of recurring issues.
Automated summarization of cases and AI-assisted creation or improvement of knowledge articles.

Technical Requirements
Native integration with the ServiceNow ITSM, CMDB, and monitoring ecosystem.
Secure data governance, auditability, multilingual support (GR/EN), and configurable human oversight.

Benefits

1. Higher First-Contact Resolution (FCR)
AI-assisted triage, solution suggestions, and a virtual agent reduce handoffs and enable faster resolution of common issues.

2. Reduced Mean Time to Resolve (MTTR)
Automatic classification, enriched context, and AI-driven diagnostics help agents identify root causes faster and close tickets more efficiently.

3. Increased Agent Productivity
Agents spend less time on repetitive tasks, manual searching, and documentation. AI auto-summarization and knowledge drafting free up capacity for higher-value work.

4. Improved Knowledge Quality & Reuse
AI continuously identifies gaps, drafts knowledge content, and surfaces high-relevance articles, strengthening the overall knowledge lifecycle.

5. Enhanced User Experience & Satisfaction
Users receive faster, more accurate responses, 24/7 availability through the virtual agent, and more transparent guidance throughout the support process.

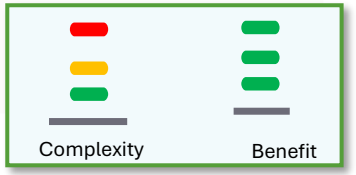
Phased Approach

Phase 1 – Foundation (0–3 months)
Enable virtual agent for FAQs and common requests
Deploy auto-triage and classification
Integrate AI-driven knowledge search for agents

Phase 2 – Acceleration (3–6 months)
Introduce AI-assisted diagnostics for technical teams
Implement auto-summarization of incidents and knowledge drafting
Expand automation for standard remediation workflows

Phase 3 – Optimization (6–12 months)
Proactive AI insights on recurring issues and problem management
Continuous model tuning based on real performance
Broaden coverage to additional domains (HR, Facilities, Security Operations)

Indicators



Timeline

Quick Win Tactical Transformational

TECH-2 IT / Software Development / DevOps / SecDevOps

Transformation

Initiative Brief

A. Developer Productivity & Code Quality
AI-assisted code generation, completion, and explanation across supported programming languages.
Automated detection of defects, anti-patterns, code smells, and opportunities for refactoring.
AI-generated unit tests and test data suggestions to improve coverage.
Automatic documentation creation and updates (inline, API, architecture notes).

B. Secure-by-Design Development
Real-time identification of security vulnerabilities and recommended remediations based on industry standards (OWASP, NIST).
Automated generation of secure code variants.
Integration with SAST/DAST and CI/CD pipelines.

C. DevOps & Delivery Acceleration
AI-assisted pipeline optimization suggestions (build times, flaky tests, dependency issues).
Environment configuration recommendations and error/incident summarization.
Automated release notes, change summaries, and deployment validation insights.

D. Legacy System Refactoring & Modernization
AI-supported code translation, modularization, documentation, and migration planning.
Identification of technical-debt hotspots based on repository history and runtime telemetry.

Benefits

1. Faster Development Turnaround
Developers complete tasks more rapidly through assisted coding, automated testing, and reduced manual effort.

2. Higher Code Quality & Stability
Continuous AI review identifies issues early, reducing defects escaping into production.

3. Stronger Security Posture
Real-time vulnerability prevention and automated secure coding patterns improve baseline application security.

4. Reduced Technical Debt
AI highlights legacy risks and supports structured refactoring, improving long-term maintainability.

5. More Efficient DevOps Processes
Builds, pipelines, and deployments improve through automated insights and fewer environment-related errors.

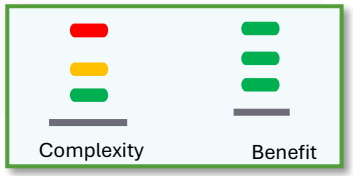
Phased Approach

Phase 1 – Developer Enablement (0–3 months)
Deploy AI coding assistant for code suggestions, explanations, documentation.
Integrate AI pair-programming into IDEs (JetBrains, VS Code).
Enable AI-driven code review and defect detection.

Phase 2 – Secure & Automated Delivery (3–6 months)
Introduce real-time security scanning and auto-fixes.
Expand automated test generation and coverage analysis.
Embed AI summarization for CI/CD failures, incidents, and pipeline insights.

Phase 3 – Optimization & Modernization (6–12 months)
AI-driven refactoring of legacy components and automated documentation of old systems.
Identification of technical debt and modernization roadmap.
Predictive analytics for release risk, performance hotspots, and change failure likelihood.

Indicators



Timeline

Quick Win Tactical Transformational
